

Git Workshop Instructions

WiFi for Demos

We may try to use a private network today (without port blocking or restrictions) to share code amongst ourselves. I've brought along a small WiFi device that can handle 30–50 people, but won't give us Internet access. That's alright though as we aren't going to use the 'net much.

Please ensure you can sign on to the following wireless network:

Wireless SSID: AI-MOBILE Password: students

Additionally, try to connect to my laptop (ping it), as I'll host some repos there. My notebook IP address is: 10.0.1.2

Handouts

These instructions are downloadable at GitHub from, of all things, a Git repo: <http://github.com/matthewmccullough/git-workshop>

You don't need Git to download them though. GitHub has a download link at the top of each page that lets you get the files in ZIP format without a client Git tool.

Bookmarks

Matthew maintains a list of interesting (hand-picked) resources about Git tools, features, releases, and uses. These bookmarks are updated weekly and can be found on Delicious.
