

Continuous Integration

Bamboo

Git support is available as a [plugin for Bamboo](<http://www.atlassian.com/software/bamboo/tour/bamboo-plugin.jsp>)

The Git plugin was authored by Kristian Rosenvold of Zenior AS in Norway and Don Brown of Atlassian.

For post-build pushes of repos up-stream, the Pre/Post Build Command Plugin will assist in calling git (must be on the Bamboo server's path):

```
git push FULLREPOURL BRANCHNAMETOPUSH:BRANCHNAMEONREMOTESIDE
```

With an actual URL

```
git push git://git.apache.org/commons-logging.git master-trial:master
```

Can walk through setting up a Git based project (from Apache Git sources)

[Bamboo on <http://localhost:8085/>] (<http://localhost:8085/>)

Hudson

Hudson is an open source CI server. It has excellent Git integration via the Git plugin.
