Maintenance

File System Check

File system check verifies integrity. Finds corrupt objects.

git fsck

Prune

Prune is a command that optimizes your repository by removing commits that are not orphaned.

git prune

or to see what is orphaned, but not actually touch them:

git prune --dry-run

Garbage Collect

GC compacts old loose commits into pack files and prunes orphan commits. It is a superset of the prune command and is more commonly run than prune.

git gc
